

## Northwest Michigan Surgery Center

### PROJECT PROFILE

Northwest Michigan Surgery Center  
Copper Ridge  
Traverse City, Michigan

Architect: Architecture Technology, PC  
Richard Skendzel, AIA

Project Type: Alterations to existing  
Building

Materials: Masonry  
Concrete

Contact: LoAnn Vande Leest  
Director

Project cost: \$1.7M

Apex Engineering & Management, Inc. was retained by Northwest Michigan Surgery Center to provide construction management services for the planning, design, bidding, permitting, and construction phases for this project.

With limited space and a growing business, NW MI Surgery Center was looking to trade in an outdoor loading dock for more usable space. New Operating Rooms, MPR'S and a relocated business office highlight this project. This project also entailed re-purposing existing rooms for different functions. Offices were created out of spaces previously used for medical services and vice versa. Construction Management for this project included everything from HVAC/Plumbing/Electrical to Security, Medical Gas, as well as all aspects of general trades.

The project kicked off in July 2014 with a planned April 2015 close-out.
